

SecurView Managed Security Services

Cost-Effective Monitoring Solution to Minimize Risk of Intrusion

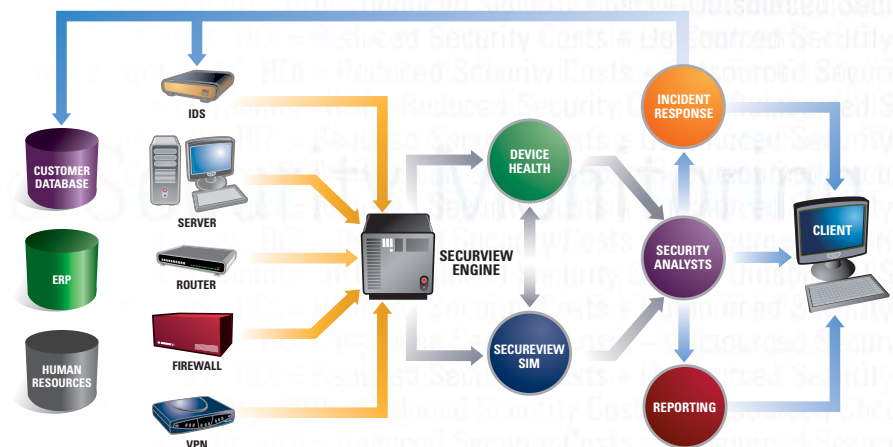

:: 24X7 REAL-TIME MONITORING, Detection and Incident Response

As organizations continue to leverage open connectivity for critical business communications between partners, customers and employees, an ever increasing risk to theft, intrusion and malicious attacks remain a constant threat to system integrity. In an effort to address vulnerabilities and mitigate the risks associated with an open computing environment, corporate security infrastructures depend heavily upon firewalls, Intrusion Detection Systems (IDS) and other preventive tools. However the purchase and implementation of security devices alone does not eliminate the risks associated with openly accessible systems. In order to establish an acceptable security posture, organizations must proactively monitor, manage, and maintain these devices, and have the resources in place to quickly react to suspicious activity.

SecurView Managed Security Services deliver outsourced monitoring of firewalls and both network and host-based intrusion detection systems. SecurView combines people, processes, and technology to create a secure environment amid the complexity of modern business networks. SecurView gives you a comprehensive real-time view of your security by collecting, analyzing, and correlating security device information from across the enterprise even when it's constantly changing in the face of new attacks, new threats, new hardware or software installed, and day-to-day network reconfigurations. Through the use of high-availability security operation centers and leading security information management technologies, SecurView provides 24x7 proactive monitoring services designed to effectively reduce the risk of attack, and provide rapid incident response as events occur.

:: LEVERAGE and Maximize Current Resources and Infrastructure Investments

SecurView offers an organization the ability to leverage existing security components and internal IT resources to deliver a comprehensive real-time monitoring, reporting and rapid response managed security solution. Seamless device integration, expert security analysis, real-time event notification, and detailed reporting enable a company to maximize infrastructure investments and empower internal IT security personnel to respond to real-time attacks and implement counter-attack measures accordingly.

:: STRATEGIC Security Intelligence

Corporate security is an evolving process that requires consistent ongoing monitoring, maintenance and posture adjustments. Traditional corporate security is tactical and reactive in approach and application. SecurView Managed Security Services enable an organization to apply the appropriate resources in a proactive manner to safeguard corporate information and provide protection from malicious activity.

:: LOWER Total Cost of Ownership

Outsourcing security monitoring responsibilities to a specialized managed security service provider offers compelling economic advantages. SecurView augments the number of operational security personnel an enterprise needs to hire, train and retain in order to maintain an acceptable security posture. The result is a lower total cost of ownership of securing critical assets.

:: UNRIVALED Expertise

SecurView security analysts possess prestigious industry certifications along with proven real-world security experience to assist organizations to quickly detect and efficiently respond to vulnerabilities, breaches and intended or accidental malicious behavior. Our dedicated security analysts are constantly refining their skills and expanding their expertise in an effort to stay one step ahead of product vulnerabilities and sophisticated hackers.

Features
• 24x7 Monitoring, Management, & Incident Response
• Dynamic attack mitigation
• Real-time status of security devices and notification of incidents
• Security event correlation and expert analysis
• Weekly security report summaries across all organization levels (C-level, ops, admin)
• Detailed monthly security report analysis
• Security Device(s) configuration audit
• Network Security Profile Baseline
• Access to real-time SecurView Client Portal
• Tiered service options to fit the needs of small, mid-size, and large organizations
• Diverse device support from industry leading security vendors

Benefits
• Improve security posture via proactive monitoring and management
• Rapid assessment and response to security incidents
• Reduce costs associated with 24x7 security monitoring activities
• Valuable reporting assists management to make informed security decisions, policy adjustments and corrective actions
• Lower Total Cost of Ownership (TCO) of securing critical business assets
• In-depth security recommendations
• Filtering, correlation and scoring of device data enable IT resources to focus on highest level security threats
• Extensive device support and flexible service options leverage investments and augment internal resources
