

# SecurView Managed Firewall Security Service

Real-Time Monitoring, Management, and Rapid Incident Response

## :: EMPOWER Internal IT Resources and Maximize Security Investments

The SecurView Managed Firewall Security Service provides assistance to an organization to cost-effectively maintain an acceptable corporate security posture. Broad device support for all leading firewall technologies and 24x7 monitoring by skilled security specialists complement existing infrastructure and personnel to enforce security policies, safeguard data and system integrity, and maintain reliable network communications.

## :: LEVERAGE the Latest SIM Technology

Through the use of high-availability Security Operation Centers and leading Security Information Management (SIM) technologies, SecurView delivers the complete monitoring, management, reporting and incident response capabilities that today's businesses require. SecurView maintains a holistic real-time view of your security by collecting, normalizing, correlating, and analyzing security device information from across the enterprise to effectively reduce the risk of attack, and provide rapid incident response as events occur.

## :: FOCUSED Expertise, Rapid Response, and Comprehensive Reporting

SecurView security analysts possess proven real-world experience. Because they monitor devices from multiple clients, their constantly evolving knowledge base of possible threats allows quick detection and efficient response to vulnerabilities, breaches and intended or accidental malicious behavior. Weekly report summaries, detailed monthly report analysis and in-depth security recommendations give management the insight needed to make informed decisions regarding security posture adjustments and corrective actions.

### KEY MESSAGES

- :: Information Security is not a one-time implementation of point products, but a continuously evolving process
- :: To establish an acceptable security posture, organizations must create security policies, proactively monitor for events, and quickly respond to malicious activity
- :: SecurView outsourced security monitoring and management services offer a lower total cost of ownership (TCO) to secure critical business assets

∴ FLEXIBLE Security Monitoring and Management Options

SecurView's tiered security service offerings are designed to meet the unique requirements of any organization. Each service plan includes the flexibility to leverage and empower internal IT personnel to respond to real-time attacks and implement counter-attack measures accordingly.
